## FROBENIUS NORM

**Lemma 1** (Frobenius norm of product of matrices). *For arbitrary two matrices,  $A \in \mathbb{R}^{m \times r}$  and  $B \in \mathbb{R}^{r \times n}$ , we have*

$$\|AB\|_F \leq \|A\|_2 \|B\|_F,$$

where  $\|A\|_2$  is the spectral norm of  $A$  and  $\|\cdot\|_F$  is Frobenius norm for matrices.

*Proof.* First, the spectral norm of  $A \in \mathbb{R}^{m \times r}$  is defined as:

$$\|A\|_2 = \max_{x \in \mathbb{R}^r, \|x\|_2 \leq 1} \|Ax\|_2.$$

Therefore, we have  $\|Ax\|_2 \leq \|A\|_2 \|x\|_2$  for  $\forall x \in \mathbb{R}^r$ . Let  $B = [b_1, \dots, b_n] \in \mathbb{R}^{r \times n}$ , where  $b_j \in \mathbb{R}^r, j \in [n]$  are the columns of  $B$ . Then we have

$$\|AB\|_F = \sum_{j=1}^n \|Ab_j\|_2 \leq \|A\|_2 \sum_{j=1}^n \|b_j\|_2 = \|A\|_2 \|B\|_F.$$
