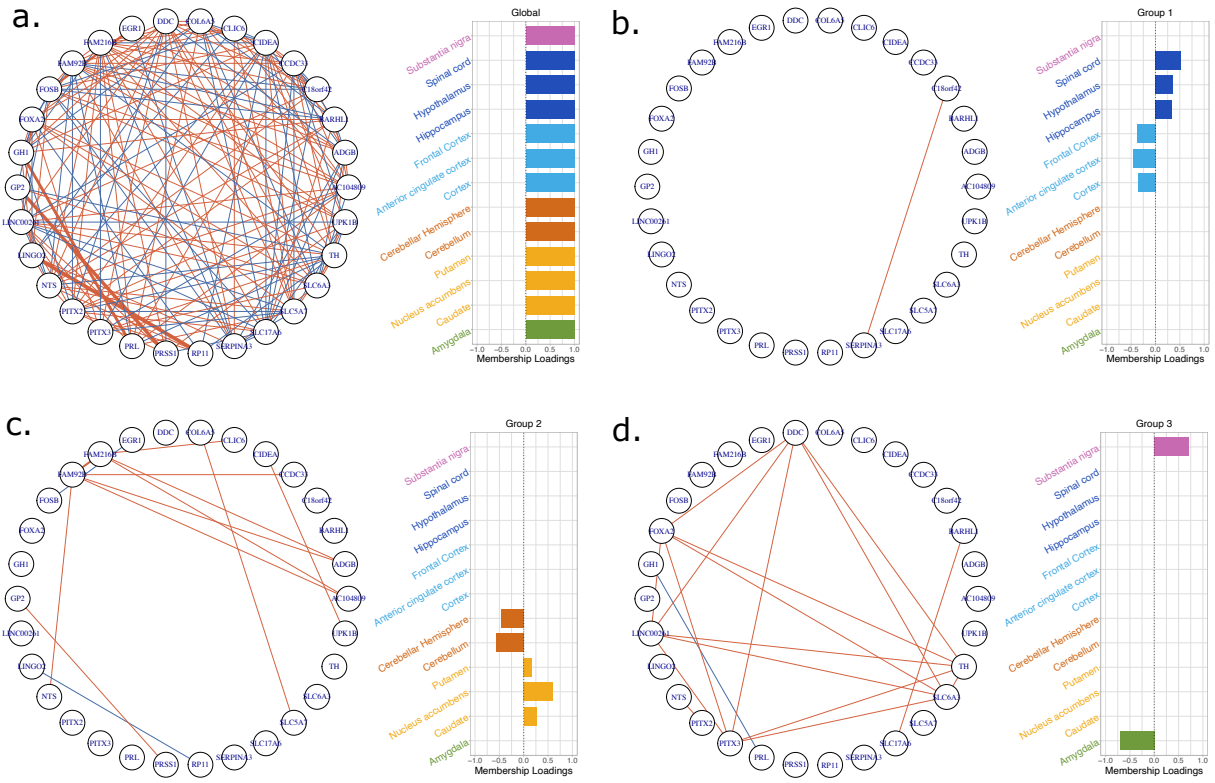

Figure 1: Sub-precision matrices and membership loadings barplots for Global connection and tissue-specific connections: a) Global pattern; b) Cortex and other tissues; c) Cerebellum and Basal Ganglia; d) Substantia nigra and Amygdala. Blue edges refer to positive entries, and red edges refer to negative entries. The width goes larger along with the absolute value of the entries. For better visualization precision entries with absolute value smaller than 0.05 are not shown in global pattern a).
